Was Man More Aquatic in the Past Fifty Years After Alister Hardy - Waterside Hypotheses of Human Evolution

www.benthamscience.com/ebooks/9781608052448

About the ebook

The book starts from the observation that humans are very different from the other primates. Why are we naked? Why do we speak? Why do we walk upright? This e-book is an up-to-date collection of the views of the most important protagonists of the Alister Hardy - Waterside Hypothesis of human evolution at the 50th anniversary of its announcement in 1960

Contents

- ▶ Revisiting Water and Hominin Evolution
- ▶ A Wading Component in the Origin of Hominin Bipedalism
- ▶ Early Hominoids: Orthograde Aquarbores in Flooded Forests?
- ▶ Pachyosteosclerosis in Archaic Homo: Heavy Skulls for Diving, Heavy Legs for Wading?
- ▶ Aquatic Scenarios in the Thinking on Human Evolution: What are they and How do they Compare?
- ▶ Human Breath-Hold Diving Ability Suggests a Selective Pressure for Diving During Human Evolution
- ▶ Marine Adaptations in Human Kidneys
