Frontiers in Natural Product Chemistry, Volume (1)

www.benthamscience.com/ebooks/9781608052127

About the ebook

This Ebook series is devoted to publishing the latest advances contributed by eminent researchers in natural product chemistry.

Contents

- ▶ Rhodium-Catalyzed Asymmetric 1,4-Addition of Organometallic Reagents
- ▶ Tandem Stereospecific Radical Cation-Mediated Syntheses of Oligostilbenoid Dimers
- ▶ Structure and Biological Activity - Diversity Orientated Synthesis
- ▶ The Nitroaldol (Henry) Reaction as the Key Step for the Synthesis of Some Natural Products
- ▶ Synthesis of Vinblastine Derivatives
- ▶ Nature as Source and Inspiration for the Synthesis of New Anticancer Drugs
- ▶ Stereocontrol in Organic Synthesis Using Silicon Compounds
- ▶ Natural Photoreceptors: Structure, Function and Applications
- ▶ Molecular Cloning of Cellulase Genes from *Trichoderma harzianum*
