Recent Advances in Medicinal Chemistry (Volume 2)

<http://ebooks.benthamscience.com/book/9781681081717/>

About the eBook

This book series focuses on leading-edge research on developments in rational drug design, synthetic chemistry, bio-organic chemistry, high-throughput screening, combinatorial chemistry, drug targets, and natural product research and structure-activity relationship studies. The series presents highly cited contributions first published in the impact factor journal Mini-Reviews in Medicinal Chemistry.

Contents

- Brief Introduction to Polyphenols, Bioactive Phytochemicals for Human Health
- Analysis and Occurrence of Flavonoids in Foods and Biological Sample
- Therapeutic Potential of Cannabinoids in the Treatment of Neuroinflammation Associated with Parkinson's Disease
- Epipolythiodioxopiperazines from Fungi: Chemistry and Bioactivities
- Updated Report on Synthesis and Biological Properties of Oxadiazine-Based Heterocyclic Derivatives
- The Emerging Role of Sunitinib in the Treatment of Advanced Epithelial Thyroid Cancer
- Considerations about Oxidative Damage on the Electron Transport Chain and the Quality Control of Mitochondrial Function for the Design of Mitochondria-Targeted Antioxidants
